Project Title Launch systemic solutions to lab waste management at McGill

Brief Description This project will implement systemic solutions to lab waste management challenges at McGill Brief

# BIGWAVEAPPLICATIONFORM

# BIGWAVE APPLICATION FORM

Initiative's survey of 70 lab users in 2021, a large majority identified non-hazardous waste materials as the main environmental impact of the University's labs compared to only 1% who said energy was a priority (see appendix 2). Survey respondents prioritised the recycling and replacement of plastics, polystyrene and PPE and overall improvements in lab waste management and awareness as urgent actions. Beyond McGill, many scientific and professional publications have highlighted the urgency of aligning lab waste management in higher education, clinical and industrial contexts with broader waste and sustainability goals (see attached references).

3. Is there an underlying systemic issue or need? Are there other areas of McGill experiencing the same issue? If so, is there an opportunity to collaborate or address the root cause/need? Limit ~200 words

Any meaningful and sustained improvements in the management of non-hazardous lab waste at McGill will require institutional leadership and coordination to develop and implement systemic solutions, plus resources and education for labs. Due to the difficult trade-offs between creating less waste and making lab processes safe, efficient and financially viable, lab users struggle to improve non-hazardous lab waste management. Thus, small lab-based projects have not yet catalysed institutional change and piecemeal waste management is inefficient. For Hazardous Waste Management (HWM), there are clear guidelines, processes, infrastructure and mandatory training requirements at McGill that align with provincial regulations. For regular waste from offices, classrooms and residences, the leadership and coordination of Buildings & Grounds and MOO have supported administrative units with consistent infrastructure and education.

McGill urgently needs a comparable level of efforts for lab waste involving these partners. This project aims to develop University-level coordination and pathways for lab waste and

# BIGWAVE APPLICATION FORM

Since 2010, the SPF has funded 6

# BIGWAVE APPLICATION FORM

of waste in hundred of labs and the diversion of non-hazardous waste from landfills and incinerators. Financial efficiencies will be realized through consolidation of national support services and the creation of relevant units such as Buildings & Grounds, Procurement and Environmental Services (BGS). SPF funding will be used to:

- 1) Develop, distribute and promote best practices in operational management structure and guidelines for hazardous lab waste management.
- 2) Develop waste reduction, reuse and recycling strategies for both hazardous and non-hazardous waste stream across multiple labs and faculties (see University guidelines).
- 3) Draft new University policy for the application to different categories of hazardous wastes.
- 4) Provide dedicated staff (one full-time Sustainability Officer and one Sustainability Intern) to support administrative units and laboratories in the implementation of best practices.

Project actions will be implemented through Sustainable Education and Outreach activities. These will be continuous:

Phase 1  
r Data collection and baseline development  
r Conduct waste audits, consult laboratories (e.g. opportunities and challenges) and provide advice to the Quebec EcoEntreprise, etc.) to determine feasible options, existing infrastructure and available financial waste management options (see Appendix A).

Phase 2  
r Identify feasible lab waste reduction, reuse and recycling strategies (e.g. plastic resin class packaging equipment) for implementation.

## PROJECT BUDGET

Criteria assessed in this section:**FEASIBILITY**

### Note:

Project teams are *strongly encouraged to secure additional financial support* from key project stakeholders for Big Wave projects. Please attach support letters demonstrating their commitment in an appendix.

If your project will involve costs savings or revenue generation, please attach a financial model in an appendix.

Big Wave project teams are *required to manage project finances and staffing needs*, if any, without assistance from SPF Staff. Please attach a support letter from your local Finance partner and, where relevant, your local Human Resource partner to demonstrate their agreement to support your project.

### Revenues

Indicate any funding you will receive or may receive to complete your project, including funds from McGill departments and units.

# BIGWAVE APPLICATION FORM

## Salaries & Wages

If applicable please indicate any paid positions needed for your project. Note: If you complete this Salaries & Wages section, you must also complete the [Staff Position Information Appendix](#)

3. Do you think that research funds should contribute to Green Initiatives in your building/institutions?

#### **Interesting comments/suggestions:**

Not sure, I think a better approach maybe to use green certification as an incentive structure, where institutions can receive more research funds if they meet a standard. Since as I understand it, going green costs more. Not sure how this change could be implemented.

Marginal. As small and fixed amounts such as the percentage devoted to art in new constructions. Let's say 5%.

It should be paid by central, funds are already tight and I'm not sure PIs would be willing to go there

Only if directly related to the research for which funds were allocated to (e.g. greener materials)

Yes, but via institutional overhead: McGill takes a portion of each grant for operations costs, and this portion should be used for Green initiatives. I'm not sure that will be allowed for tri-agency grants.

No, our grants are stretched too thin as it is.

Within institutional funds but not operating research funds of PIs

6. Which component of

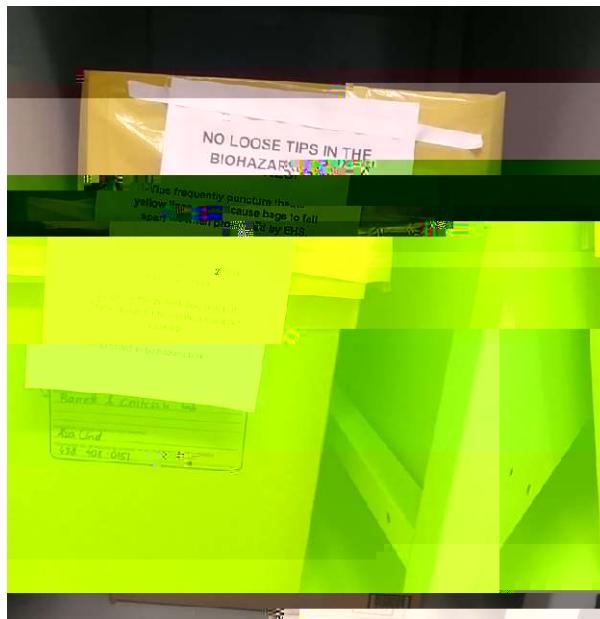

## **Appendix- McGill's lab waste in photos**

**Pipette tips and tip boxes represent a major stream of plastic waste in many wet labs**

**One week's swath of ice pads collected in one lab**

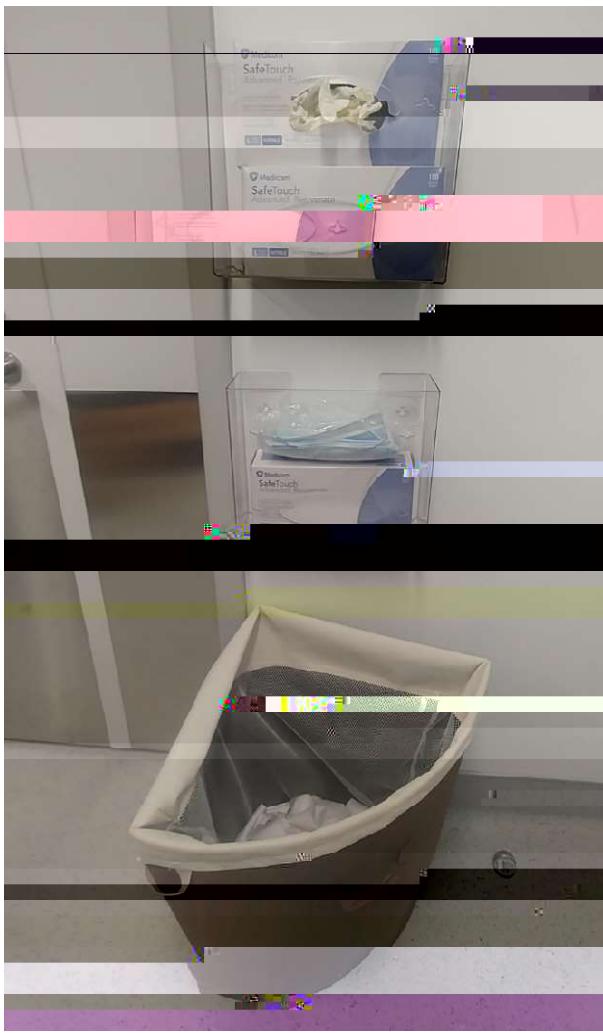

**All biohazardous waste is sorted into colour coded bags and collected regularly by Hazardous Waste Management. This is reinforced by mandatory training for all lab users.**

**Miscellaneous plastic waste gathered under a desk**

**PP waste collected for  
disposal via landill**

[U. Ottawa](#)

Dear SRF Governance Council,

Please accept my thanks (and my apologies for the long email) for your interest in “Solutions to lab waste management at McGill”. I am currently a PhD student in the department of Experimental medicine and have been involved with the Green Lab Initiative (GLI) as a student and staff initiative that aims to minimize and reuse materials used in our labs. We are passionate about improving our environmental footprint by increasing our awareness about the habits to help the planet while performing excellent science in our labs.

The proposed budget request is GLI's last advocacy effort to increase available resources to manage the growing of plastic waste and backlog of waste from the past year. Through my PhD career and my personal experience, I have seen the exponential stream of lab waste generated during our research. This waste accumulates even when classroom are not in use, such as during the COVID-19 pandemic.

The GLI has worked hard to raise awareness and promote best practices for the lab community moving to a more sustainable future. We have organized events such as “Lab Sustainability and Outreach” meetings, lab users through unison of a well-attended Green Lunch & Learn.

We believe it is important to keep this momentum going and continue to work on managing waste in our labs. As a member of the University, it is important to waste in our own goals and bring us closer to a being zero-waste campus.

Please do not hesitate to contact us if you have any questions or concerns regarding lab waste management. Thank you for considering this important proposal.

Sincere regards,

Juliet Guay (PhD student and co-lead of the McGill Green Lab Initiative)

Dear SPF Governance Council

I am offering my support for the SPF proposal to develop university level resources for lab waste management. I am an Assistant Professor in the Natural Resource Sciences Department at the McGill Macdonald Campus and also chair the Department Safety Committee which deals with hazardous waste protocols and lab operations and chair the FAES Macdonald Campus Sustainability Committee. As a Principal Investigator of a research lab and role as Chair on these committees, I am acutely aware of the large amounts of waste, especially plastic waste, generated by researchers and students and researchers across the Macdonald campus view this as a serious problem how they conduct their research activities and as a significant barrier of achieving McGill's waste strategic initiative. In my lab alone we likely generate hundreds of thousands of plastic tips annually. This project, which sees more than an individual lab approach will have a significant impact on achieving

Montreal, February 14 2023

Dear SPF Governance Council,

As the Director of Building & Grounds at McGill University, responsible for providing the McGill campus community with an environment that is clean, safe and functional, I would like to endorse the project to launch systemic solutions to lab waste management at McGill.

My unit manages non-hazardous waste and recycling operations on the downtown campus. We are working with others to drive the implementation of the [Waste Reduction and Diversion Strategy \(2018-2025\)](#). This project will be essential for implementing the strategy in labs where a higher level of coordination and communication are required to support the lab safety and integrity of teaching and research.

After many years of ad hoc sustainability initiatives, often based in individual labs, we can attest to the need for having a well-coordinated and institutional approach to reducing the environmental impacts of labs. Over the last 6 months we have worked closely with the Sustainable Labs Working Group and a dedicated Sustainability Office focused on labs, to develop the Sustainable Labs Guide, a University-wide guide for sustainable lab operations, and a pilot project for recycling lab-generated PPE waste. By allocating much needed financial and human resources for managing lab waste, this project will now move the University forward towards diverting 90% of our waste from landfills and becoming zero-waste by 2035.

I strongly encourage and support this proposal for funding from the Sustainability Projects Fund.

Sincere regards

George Lazaris  
Director, Buildings & Grounds
